Ideavit Solid Surfaces material

It is an advanced composite material made of 2/3 of Aluminum Trihydrate (ATH) and 1/3 polymer resins, pigments and hardeners.

Aluminum Trihydrate (ATH) is a powdery substance derived from Bauxite mineral, odorless, with the following properties :

- Flame retardant
- Non-Toxic , Non-carcinogenic
- Halogen free
- Chemically inert
- Low abrasiveness
- Acid resistant
- Contains thermal characteristic that provides translucency and whiteness .
- For Solid Surface No protective sealants are required .
- The materials used are NO-POROUS -100% No Absorption
- Thanks to the ATH main component that is flame-retardant, it is fire-proof.
- Most damages including scratches, severe impact , heat or chemical damages can usually be repaired on site.
- To restore the original, smooth and hygienic solid surface integrity.
- Moreover, Solid Surfaces have the best "invisibility" of seams of all the products (they are Seamless)
